II. Assertion: Offsprings produced by asexual reproduction are genetically identical to the parent.

Reason: Asexual reproduction involves only mitosis and no meiosis.

A B C D

5. Name an organism where cell division is itself a mode of reproduction.
6. Name the phenomenon where the female gamete directly develops into a new organism with an avian example.
7. What is parthenogenesis? Give two examples from animals
8. Which type of reproduction is effective -Asexual or sexual and why?
9. The unicellular organisms which reproduce by binary fission are considered immortal. Justify.
10. Why is the offspring formed by asexual reproduction referred as a clone?
11. Why are the offsprings of oviparous animal at a greater risk as compared to offsprings of viviparous organisms?
12. Give reasons for the following:
    (a) Some organisms like honey bees are called parthenogenetic animals
    (b) A male honey bee has 16 chromosomes where as its female has 32 chromosomes.
13. Differentiate between the following:
    (a) Binary fission in amoeba and multiple fission in *Plasmodium*
    (b) Budding in yeast and budding in *Hydra*
    (c) Regeneration in lizard and *Planaria*
14. How is juvenile phase different from reproductive phase?
15. What is the difference between syngamy and fertilization?
