5.4.2 When revised values of assets and liabilities are not shown in the books

Under this method, the assets and liabilities are shown at their original values and not at the revised values in the books and in the balance sheet which is prepared immediately after the admission of a partner. The net result of revaluation is adjusted through the capital accounts of the partners. A Memorandum revaluation account which is a temporary account is opened when the revised values are not to be shown in the books of accounts.

5.5 New profit sharing ratio and sacrificing ratio

5.5.1 New profit sharing ratio

It is necessary to determine the new profit sharing ratio at the time of admission of a partner because the new partner is entitled to share the future profits of the firm. New profit sharing ratio is the agreed proportion in which future profit will be distributed to all the partners including the new partner. If the new profit sharing ratio is not agreed, the partners will share the profits and losses equally.

5.5.2 Sacrificing ratio

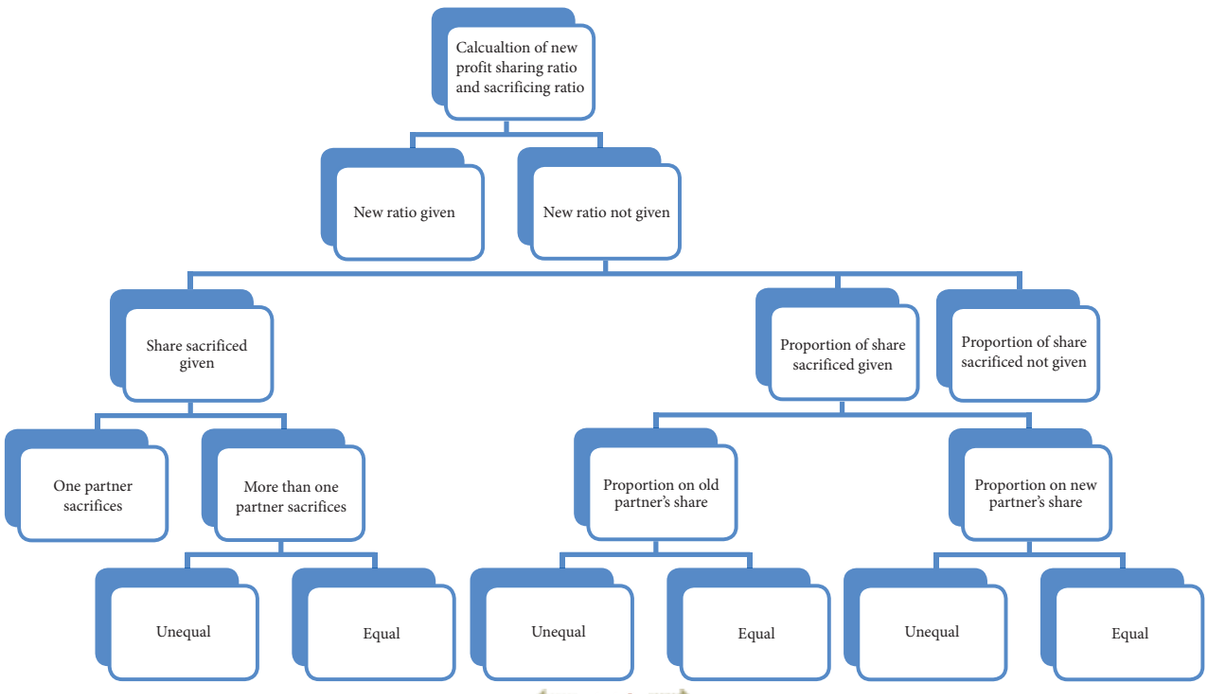

The old partners may sacrifice a portion of the share of profit to the new partner. The sacrifice may be made by all the partners or some of the partners. Sacrificing ratio is the proportion of the profit which is sacrificed or foregone by the old partners in favour of the new partner. The purpose of finding the sacrificing ratio is to share the goodwill brought in by the new partner. The share sacrificed is calculated by deducting the new share from the old share.

Share sacrificed = Old share - New share

Sacrificing ratio = Ratio of share sacrificed by the old partners

Share of the new partner is the sum of shares sacrificed by the old partners.

Tutorial note: When the new profit sharing ratio is not given in the problem, it is to be calculated based on the information given in the problem.
