HYDROXY COMPOUNDS AND ETHERS

Alfred Bernhard Nobel

Alfred Bernhard Nobel was a Swedish chemist, engineer, inventor, and philanthropist. Nobel found that when nitroglycerine was incorporated in an inert absorbent like kieselguhr (diatomaceous earth) it became safer and more convenient to handle. He patented this mixture in 1867 as "dynamite". Nobel prizes were established in accordance with his will. The Noble prizes is considered as one of the precious awards in the fields of chemistry, literature, peace activism, physics, Economics and physiology or medicine.

Learning Objectives

After studying this unit the student will be able to

- describe the important methods of preparation and reactions of alcohols
- explain the mechanism of Nucleophilic substitution reaction of alcohols and ethers.
- explain the elimination reaction of alcohols.
- describe the preparation and properties of phenols
- discuss the preparation of ethers and explain their chemical reactions.
- recognise the uses of alcohols and ethers
