i) Halogenation:

Anisole undergoes bromination with bromine in acetic acid even in the absence of a catalyst, para isomer is obtained as the major product.

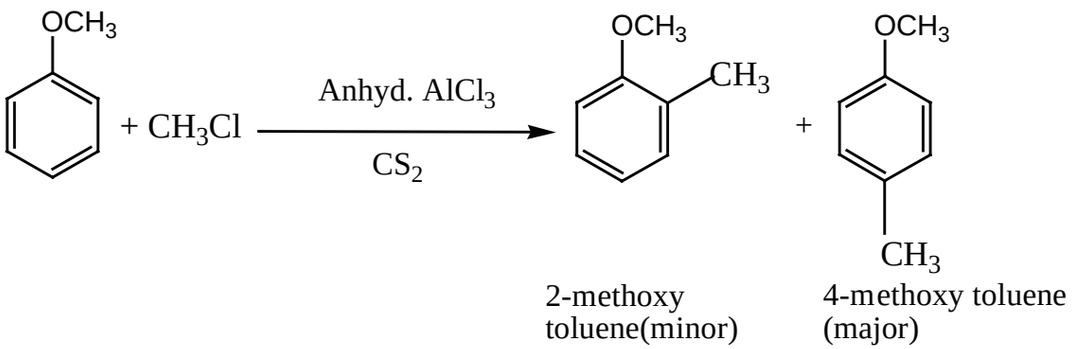

ii) Nitration:

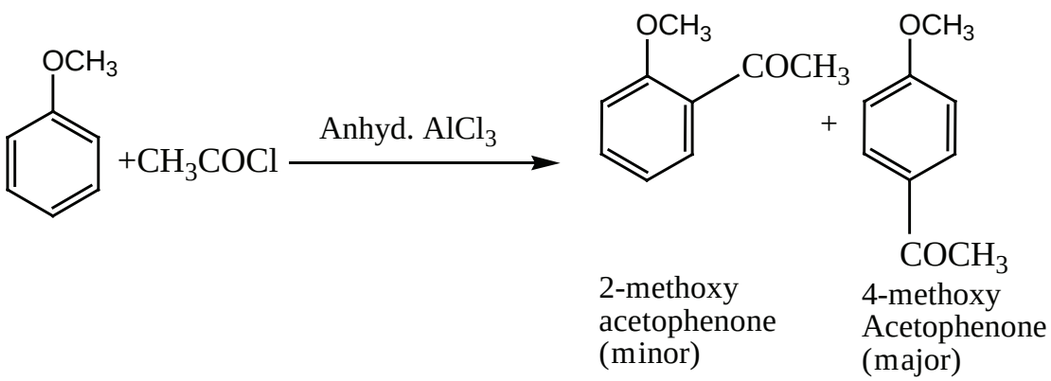

Anisole reacts with a mixture of conc. H_2SO_4/Conc.HNO_3 to yield a mixture of ortho nitro anisole and para nitro anisole.

iii) Friedel Craft's reaction:

Anisole undergoes Fridel Craft's reaction in presence of anhydrous $AlCl_3$ as a catalyst.

Uses of ethers

Uses of Diethyl ether

1. Diethyl ether is used as a surgical anaesthetic agent in surgery.
2. It is a good solvent for organic reactions and extraction.
