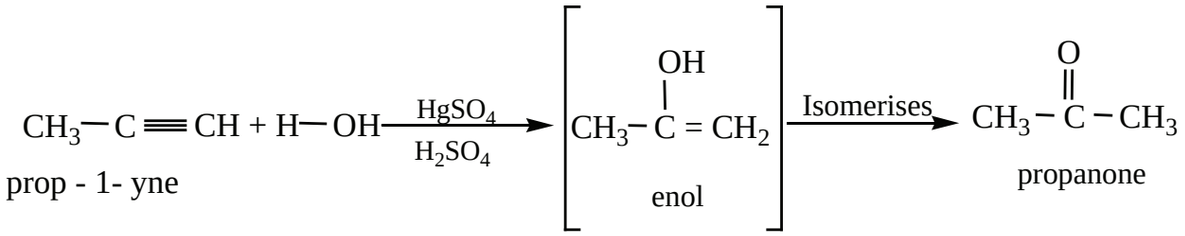
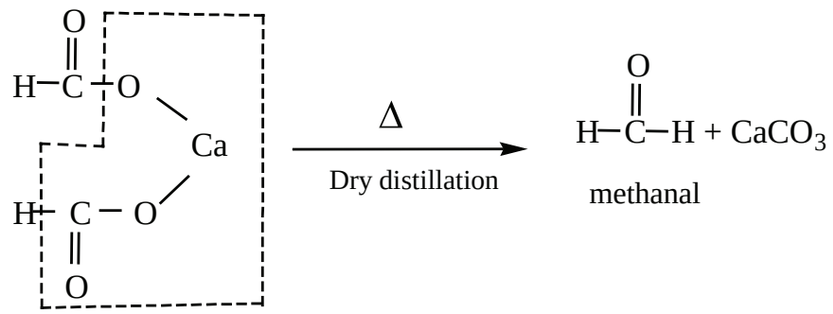
b) Hydration of alkynes, other than acetylene gives ketones



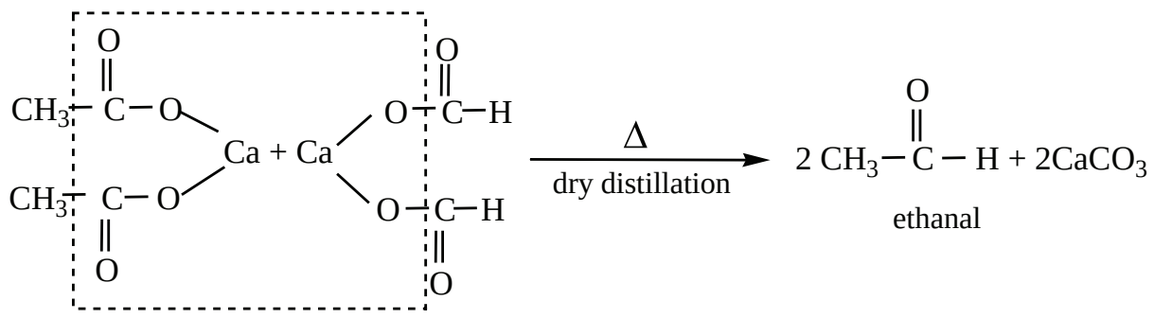
4. From calcium salts of carboxylic acids

Aldehydes and ketones may be prepared by the dry distillation of calcium salts of carboxylic acids.

a) Aldehydes are obtained when the mixture of calcium salt of carboxylic acid and calcium formate is subjected to dry distillation.

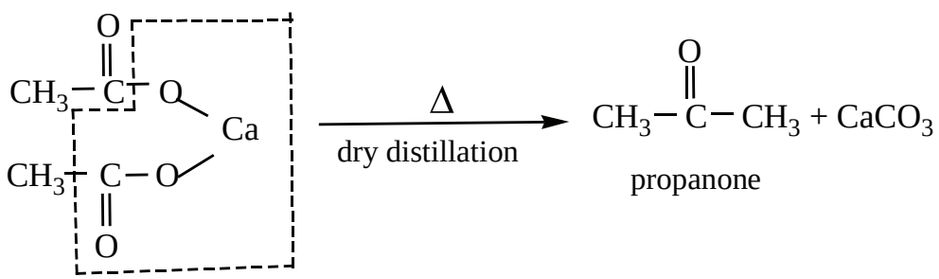


Calcium methanoate



Calcium ethanoate Calcium methanoate

b) Symmetrical ketones can be obtained by dry distillation of the calcium salt of carboxylic acid (except formic acid)



Calcium ethanoate
