iii) Fluoroquinolones Examples Clinafloxacin, ciprofloxacin, levofloxacin	Inhibits bacterial enzyme DNA gyrase **Uses** To treat urinary tract infections, skin infections, and respiratory infections (such as sinusitis, pneumonia, bronchitis), pulmonary infections in cystic fibrosis	 Ciprofloxacin
iv) Tetracyclines Examples Doxycycline, minocycline, oxytetracycline	Inhibit the bacterial protein synthesis via interaction with the 30S subunit of the bacterial ribosome **Uses** Used in the treatment of peptic ulcer disease, infections of the respiratory tract, cholera, acne vulgaris.	 Oxytetracycline
v) Aminoglycosides Examples Kanamycin, gentamicin, neomycin	Bind to the 30S subunit of the bacterial ribosome, thus stopping bacteria from making proteins **Uses** Used to treat infections caused by gram-negative bacteria	 Kanamycin
