## Construction of AC generator (Not for examination)

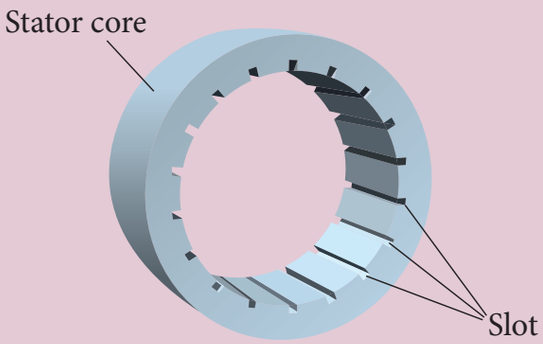

Alternator consists of two major parts, namely stator and rotor. (This box is given for better understanding of constructional details)

### i) Stator

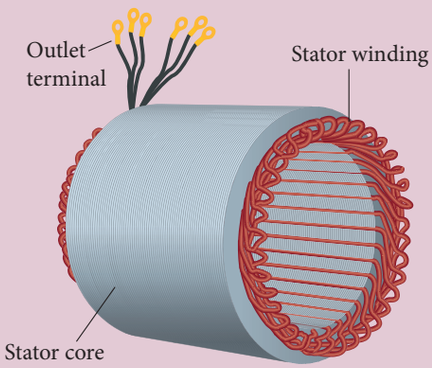

Stator has three components, namely stator frame, stator core and armature winding.

**Figure(b):** Stator core with rectangular loop

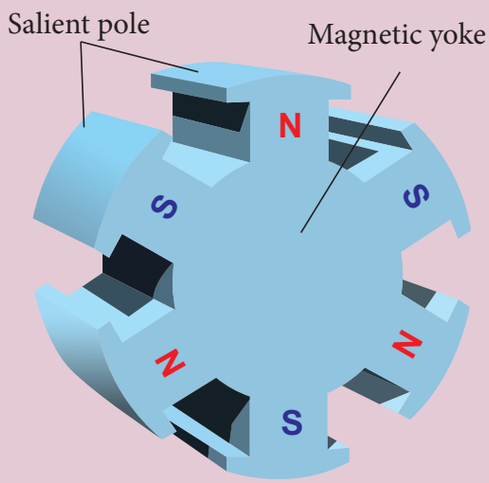

**Figure(a):** Stator core with empty slots

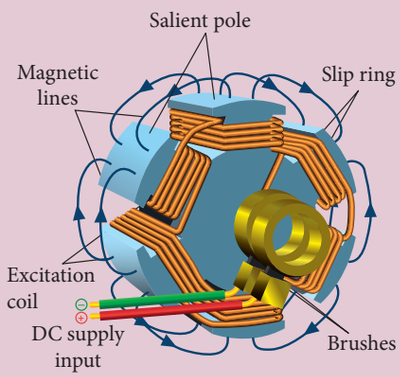

**Figure(c):** Stator core with armature windings

### ii) Rotor

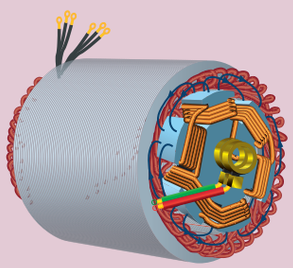

Rotor contains magnetic field windings, slip rings and brushes mounted on the same shaft.
