UNIT 5

LIPID METABOLISM

Konrad Emil Bloch and Feodor Lynen

Konrad Emil Bloch (German American Biochemist) and Feodor Lynen (German Biochemist) both in 1964 received Nobel Prize in Physiology or Medicine for discoveries concerning the mechanism and regulation of the cholesterol and fatty acid metabolism. Bloch and Lynen studied the biochemistry of cholesterol by using a method developed in Rudolf Schoenheimer's lab that used radio isotopes as tracers to chart the path of particular molecules in cells and living organisms.

JG3ZVQ

Learning Objectives

After studying this unit the students will be able to

- recognise the nutritional importance of lipids
- explain the β -Oxidation of fatty acid.
- describe the cholesterol synthesis.
- recall various products of cholesterol
- describe phospholipids synthesis
- Understands enzymatic hydralyse by phospholipids
- recognise alter Atherosclerosis
