UNIT 6

MOLECULAR BIOLOGY

Karry Mullis

Modern biology can be divided into two epochs, the one before the invention of the Polymerase Chain Reaction (PCR) procedure and the one after it. This method is now routinely used in all molecular biology labs and also for medical diagnosis and forensic investigation. Karry Mullis is an American biochemist who was responsible for this invention and was duly awarded Nobel Prize in chemistry in 1993.

Learning Objectives

After studying this unit the students will be able to

- Explain the central dogma of Molecular Biology.
- Explain the replication process.
- Describe the mechanism of RNA synthesis.
- Explain the structure of activated tRNA.
- Describe the mechanism of protein synthesis.
