9. In Prokaryotes, introns are absent in the primary transcript.

10. The reaction that makes billions of copies of a small region of DNA is known as _____

11. Transcription is a process by which DNA sequence is read by an enzyme called _____ and a complementary, antiparallel RNA strand is synthesized.

12. RNA polymerase, along with transcription factor sigma, binds to a sequence of DNA called the _____

13. While comparing the coding strand of DNA and a transcribed RNA the base _____is replaced by _____.

14. Name the three types of RNA.

15. _____is type of RNA carries the genetic information from the DNA to the cytoplasm.

16. An mRNA that can contain information for encoding more than one mRNA and are called _____.

17. The cytoplasmic cellular organelle involved in translation process is _____.

18. _____ play a very important role in protein synthesis and acts as molecular "bridges" connecting the mRNA and the growing polypeptide chain.

19. State the different stages of translation process.

20. _____ is also known as DNA cloning which allows us to insert a new gene into an organism.

III Match the following

21. Sanger's Method	-	Bacterial Translation
22. Shine Dalgarno sequence	-	UAG
23. Stop codon	-	AUG
24. Taq polymerase	-	DNA sequencing
25. Start Codon	-	Polymerase Chain Reaction
