lipid disorders.

5. Galactosemia is an inherited disorder characterized by inability of the body to metabilize galactose. The major deficient enzyme is galactose 1 phosphate uridyl transferase (GALT).

6. Von Gierke disease is a type I glycogen storage disease characterized by deficiency of glucose 6 phosphatase, that hydrolyzes glucose 6 phosphate. This impairs the ability of the liver to produce glucose from glycogen.

7. A deficiency in clotting factors causes hemophilia, with several types described.

8. Alkaptonuria or black urine disease is a rare genetic inherited disorder, characterized by deficiency in homogetisate 1,2 dioxygenase, which takes part in the degradation of tyrosine.

9. Albinism is characterized by pigmentation of skin due to impairment in the melanin synthesis.

10. Tay-Sachs disease, a lysosomal disorder, is characterized by the inability of hexosaminidase A to degrade the GM2 gangliosides in brain. This causes neurotoxicity and death of child.

EVALUATION

I. Choose the correct answer

1. Which of the following enzyme deficiency causes galactosemia
   a. gluco kinase
   b. galacto kinase
   c. galactose 1 phosphate uridyl transferase
   d. phosphoglucomutase
2. Liver failure and mental retardation are symptoms of
   a. von-gierke diseases
   b. galactosemia
   c. albinism
   d. all of these
3. glucose 6-phosphatase deficiency causes
   a. galactosemia
   b. albinism
