UNIT
9

ENZYME KINETICS

Jon Jakob Berzelius James B. Sumner

In 1835 by the Swedish chemist Jon Jakob Berzelius who termed their chemical action catalytic. It was not until 1926, however, that the first enzyme was obtained in pure form, a feat accomplished by James B. Sumner of Cornell University. Sumner was able to isolate and crystallize the enzyme urease from the jack bean. His work was to earn him the Nobel Prize in 1947.

Learning Objectives

After studying this unit the students will be able to

- Derive the Michaelis – Menten equation.
- Understand the types of enzyme inhibitors.
- Explain the differences between competitive, non-competitive and un-competitive inhibition
