Antibodies against red cell agglutinogens are called agglutinins. Antibody-A and Antibody-B are examples of agglutinins. Another group of antigens found on the red blood cells of people is the Rh factor which leads to the determination of the second major blood group system i.e. Rh system. There are eight common types of blood groups in combination of ABO and Rh blood grouping systems. Blood grouping tests are used for avoiding transfusion reactions and transplantation rejections.

EVALUATION

I. Choose the correct Answer

1. Who developed first vaccine for Rabies?

   a. Edward Jenner b. Rober Koch

   c. Louis Pasteur d. Lady Montagu

2. Which one of the following diseases is a pandemic disease?

   a. AIDS b. Common cold

   c. Rabies d. plague

3. Find the suitable vaccine for tuberculosis from the following vaccines:

   a. DPT b. MMR

   c. BCG d. TDP

4. One of the four cardinal sign of inflammatory response “dolor” refers to

   a. Swelling b. Redness

   c. Heat d. Pain

5. Which type of the biomolecule is more antigenic in nature?

   a. Protein b. Carbohydrates

   c. Lipid d. Nucleic acid

6. Name of the protein produced in response to and counteracting a specific antigen from B-cells.

   a. antibody b. Interferon

   c. complement d. acute phase protein

7. What is the name of the region of antibody which recognizes and binds to antigen?

   a. paratope b. agretope

   c. epitope d. none
