S.No.	Particular/ Reagents	B	S_1	S_2	S_3	S_4	S_5	T
1.	Standard solution	-	0.5	1.0	1.5	2.0	2.5	-
2.	Concentration (µg)	-	50	100	150	200	250	-
3.	Volume of Test solution (ml)	-	-	-	-	-	-	0.5
4.	Volume of NaOH (ml)	2.5	2.0	1.5	1.0	0.5	-	2.0
5.	Lowry's reagent	4.5	4.5	4.5	4.5	4.5	4.5	4.5
Mix the contents in the test tubes								
6.	Volume of Folin's reagent (ml)	0.5	0.5	0.5	0.5	0.5	0.5	0.5
Incubate all the test tubes @ room temperature								
7.	Optical density @ 660nm							

Calculation:

0.5ml of the test solution corresponds to _____ µg of BSA

Therefore, 100ml of the test solution will contain 100 x $\frac{\text{_____ µg of BSA}}{0.5}$

= Z µg of BSA

Result:

The amount of protein present in the given test solution was found to be _____ µg
