S.No.	Particular/ Reagents	B	S_1	S_2	S_3	S_4	S_5	T
1.	Standard solution (ml)	0	0.5	1.0	1.5	2.0	2.5	-
2.	Concentration (µg)	0	50	100	150	200	250	-
3.	Test solution (ml)	-	-	-	-	-	-	1
4.	Distilled water (ml)	3.0	2.5	2.0	1.5	1.0	0.5	2.0
5.	Diphenyl amine (ml)	2	2	2	2	2	2	2
Keep in baoiling water bath for 10 minutes, cool and take reading at 565 nm.								
6.	Optical density at 565 nm							

Calculation:

1.0ml of the test solution corresponds to _____ µg of DNA

Therefore, 100ml of the test solution will contain 100 x $\frac{\text{_____ µg of DNA}}{1.0}$

= Z µg of DNA

Result:

Amount of DNA present in given 100ml of the test solution is _____ µg
