5. ABO BLOOD GROUPS - DEMONSTRATION EXPERIMENT

AIM

To find out the blood group of a classs / school students.

MATERIAL REQUIRED

1. Human blood sample
2. Antisera A and B
3. Antisera D
4. Lancet
5. Spirit (70% alcohol)
6. Slides / White tile
7. Cotton
8. Mixing sticks

PRINCIPLE

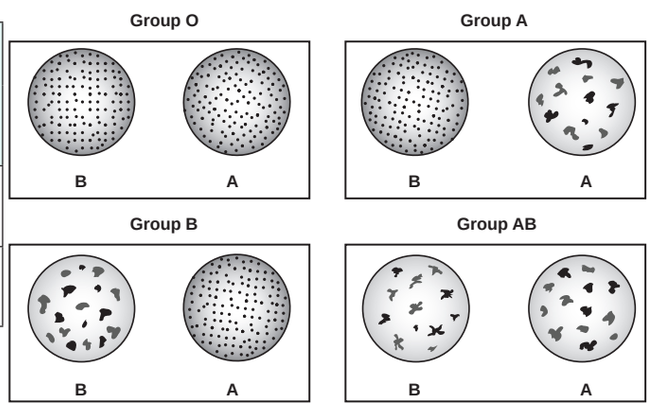

The determination of ABO blood group is based on the agglutination reaction. The A, B and Rh antigens present on the surface of the RBC react with the corresponding antibodies (antisera) to form visible agglutination or clumping.

PROCEDURE

1. Take a clean dry slide / white tile and divide it into three divisions.
2. Wipe the middle finger with cotton moistened with 70% alcohol and allow to dry.
3. Prick disinfected area with sterile lancet.
4. Squeeze the finger and allow a drop of blood to fall on each division of the slide/ white tile.
5. Add one drop of antiserum into the appropriately labelled drop of blood on the slide/ white tile.
6. Mix serum and blood drops with the applicator stick.
7. Observe the mixtures for agglutination and record the blood groups.
8. Record the findings in a tabular form.

OBSERVATION

Agglutination with….			Blood Group
Anti A	Anti B	Anti D	
(+)-Agglutination		(-)-Non Agglutination	

RESULT

The given blood is found to be_____group

WARNING: Use only sterilized lancets. Avoid using bell pins or other sharp objects for pricking.
