↓

It is then back extracted with water from the organic solvent by adding potassium or sodium hydroxide

↓

Shifts between water and solvent aid in the purification of penicillin

↓

The resulting sodium or potassium penicillin is then crystallized

↓

Then it is washed and dried and used for commercial purpose

6.7 Industrial Production of Wine

An alcoholic distilled beverage is produced by concentrating alcohol from fermentation by distillation. Beer or ale is produced by the fermentation of malted grains. Wine is prepared from grapes belonging to species *Vitis vinefera*. It is also produced from other fruits like peach, pear, dandelion and honey. Generally wine contains 16% of alcohol. Wine production from crushed grapes is called enology. The various forms of wine are listed below in the table 6.5.

Red wine is extracted from the skin of red grapes containing red pigment (anthocyanin). During the preparation of red wine, all the anthocyanin pigments are solubilized by the extract. Pink wine is obtained from either pink grapes or red grapes in which fermentation last for only 12 to 36 hour and only less amount of anthocyanin pigments are solubilized. White wine is prepared from the white grapes or from the red grapes in which pigment involved in colouring is removed.

Aqu-aori is the concept that oceans and other bodies of water, might impart unique characteristics on the aging process of submerged wine in water. The ocean provides a unique environment with cold temperatures, constant pressure, and little to no light and constant motion.

Generally yeasts are the natural microbiota of grapes

Both wild yeast and cultivated yeast are involved in the wine fermentation. Natural yeast is not potable because they do not produce much wine and are less

Table 6.5: Shows different varieties of wine

Red wine	It has red pigments
White wine	It does not contain red pigments
Rose wine	It has less red pigments
Dry wine	It has more alcohol content
Sweet wine	It has more sugar content
Fortified wine	It is fortified with other alcoholic beverage
Sparkling wine	It has considerable amount of CO_2
Still wine	It does not contain carbon dioxide
Distilled wine	Brandy (alcohol content 21%)
Table wine	It has low alcohol and sugar content
