Prevention and Treatment

Protection against **mosquito bites** during the day and early evening is a key measure to prevent Zika virus infection. It is important to eliminate these mosquito breeding sites, Health authorities may also advise use of **larvicides and insecticides** to reduce mosquito populations and disease spread. There is no treatment available for Zika virus infection or its associated diseases. **No vaccine is yet available for the prevention or treatment of Zika virus infection. Development of a Zika vaccine remains an active area of research.**

Summary

This chapter dealt with the history, morphology, chemical properties, viral replication, virus classification, cultivation and detection of cytopathic effects of virus. Most important viruses such as Adeno, herpes, hepatitis, Influenza, rabies, HIV and Arbo virus, its morphology, classification, pathogenesis and its laboratory diagnosis were discussed.
