Alternative	Economic conditions		
	High growth(Rs.)	Normal growth(Rs.)	Slow growth (Rs.)s
Stocks	10000	7000	3000
Bonds	8000	6000	1000
Debentures	6000	6000	6000

Determine the best investment plan using each of following criteria i) Maxmin ii) Minimax.

Summary

- In a transportation problem if the total supply equals the total demand, it is said to be balanced transportation problem. Otherwise it is said to be unbalanced transportation problem
- **Feasible Solution**: A feasible solution to a transportation problem is a set of non-negative values $x_{ij}(i=1,2,..,m, j=1,2,\ldots n)$ that satisfies the constraints.
- **Basic Feasible Solution**: A feasible solution is called a basic feasible solution if it contains not more than m+n-1 allocations, where m is the number of rows and n is the number of columns in a transportation table.
- **Optimal Solution**: Optimal Solution is a feasible solution (not necessarily basic) which optimizes(minimize) the total transportation cost.
- **Non degenerate basic feasible Solution**: If a basic feasible solution to a transportation problem contains exactly m+n-1 allocations in independent positions, it is called a Non degenerate basic feasible solution.
- **Degeneracy : If** : If a basic feasible solution to a transportation problem contains less than m+n-1 allocations , it is called a degenerate basic feasible solution.
- In an assignment problems number of rows and columns must be equal
- The optimum assignment schedule remains unaltered if we add or subtract a constant from all the elements of the row or column of the assignment cost matrix.
- If for an assignment problem all $C_{ij} > 0$ then an assignment schedule (x_{ij}) which satisfies $\sum C_{ij}\, x_{ij} = 0$ must be optimal.

GLOSSARY (கலைச்சொற்கள்)	
Approximation	தோராயமாக
Assignment problems	ஒதுக்கீடு கணக்குகள்
Decision theory	முடிவு கோட்பாடுகள்
Degenerate	சிதைந்த
Destination	சேருமிடம்
Feasible solution	ஏற்புடையத் தீர்வு
