5. Soda water became a popular refreshment under the name _____

a) Schweppe
b) Venel
c) Priestly
d) Seltz

Passage –13

Food, generally speaking, decays as time passes. Cooked food or uncooked meat and fish or fruits lose their freshness, become old and spoil in warm, wet air by undergoing chemical changes because of bacteria, yeasts and moulds. Some spoil within hours while other take days or weeks. Salt, Sun's heat, oil have been used to store and save food items from decomposing. Salted and dried fish is an example.

During the past five or six decades, several changes have taken place in our life styles. There are more towns and cities today than I the past; people are concentrated in these places. Population has grown in their land. And they also like to eat readymade foods.

All these changes have brought about one big change. That is, processed and canned foods an drinks have become part of our food habits. Getting food items like meat, fish, peas, fruits, and soft drinks like Cococola, Pepsi, Rasna ready for sales inside a country or in another country has become an industry. Factories prepare and produce readymade foods, using the knowledge provided by food science and Technology. They use caning, dehydration, smoke and refrigeration methods to process and preserve foods. For this purpose they se food additives to ad flavours, colour, nutrients to foods.

Food can be preserved by controlling or destroying the agents that spoil foods. A few of these agents are bacteria, moulds, insects, rodents, warm and wet air.

Caning is a thermal or heat processing where foods are subjected to temperatures that are high enough to kill most microorganisms. Foods are sterilized in airtight, heat-resistant pouches.

Dehydration of food removes water in the food and thus prevents bacteria from growing. IT compresses and freeze-dries food which can resume their original shape on rehydration.

Refrigeration and freezing help store foods along with their nutrients and flavours. Smoke treatment to food can preserve them only for a short time. Smoke contains guaiacol which has only limited capacity. It is now being used to add an appealing flavor.

Questions

1. Cooked or uncooked food spoils by undergoing _____ changes

a) climatic
b) chemical
c) physical
d) biological

2. Salt, heat & oil save food items from _____

a. burning
b. decomposing
