54. List out any five morphological adaptations of halophytes.
55. What are the advantages of seed dispersal?
56. Describe dispersal of fruit and seeds by animals.

Glossary

Antibiosis: An association of two organisms which is harmful to one of them.

Biome: A major regional community of plants and animals with similar life forms and environmental conditions.

Biosphere: The envelope containing all living organisms on earth.

Community: A group of organism living in the same place.

Flora: The kinds of plants in region

Frugivores: Fruit eating organisms

Hekistotherms: (Temperature less than 70°C) Where very low temperature prevails and the dominant vegetation is alpine vegetation.

Landscape: The visible features of an area of land.

Lianes: Twining vines with woody stems, common in forest of warm climate.

Megatherms: (Temperature more than 240°C) Where high temperature prevails throughout the year and the dominant vegetation is tropical rain forest.

Mesotherms: (Temperature ranges between 170°C and 240°C) Where high temperature alternates with low temperature and the dominant vegetation is tropical deciduous forest.

Microtherms: (Temperature ranges between 70°C and 170°C) Where low temperature prevails and the dominant vegetation is mixed coniferous forest.

Population: A group of individuals of a single species.

Scotoactive type of stomata: Stomata opens during night in succulent plants and closes during the day.

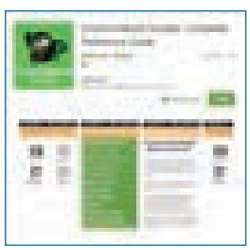

Vivipary: When seeds or embryos begin to develop before they detach from the parent.
