14. In a test cross involving F_1 dihybrid flies, more parental type offspring were produced than the recombination type offspring. This indicates
    a) The two genes are located on two different chromosomes
    b) Chromosomes failed to separate during meiosis
    c) The two genes are linked and present on the some chromosome
    d) Both of the characters are controlled by more than one gene
15. The genes controlling the seven pea characters studied by Mendel are known to be located on how many different chromosomes?
    a) Seven b) Six
    c) Five d) Four
16. Which of the following explains how progeny can posses the combinations of traits that none of the parent possessed?
    a) Law of segregation
    b) Chromosome theory
    c) Law of independent assortment
    d) Polygenic inheritance
17. "Gametes are never hybrid". This is a statement of
    a) Law of dominance
    b) Law of independent assortment
    c) Law of segregation
    d) Law of random fertilization
18. Gene which suppresses other genes activity but does not lie on the same locus is called as
    a) Epistatic b) Supplement only
    c) Hypostatic d) Codominant
19. Pure tall plants are crossed with pure dwarf plants. In the F_1 generation, all plants were tall. These tall plants of F_1 generation were selfed and the ratio of tall to dwarf plants obtained was 3:1. This is called
    a) Dominance b) Inheritance
    c) Codominance d) Heredity
20. The dominant epistatis ratio is
    a) 9:3:3:1 b) 12:3:1
    c) 9:3:4 d) 9:6:1
21. Select the period for Mendel's hybridization experiments
    a) 1856 - 1863 b) 1850 - 1870
    c) 1857 - 1869 d) 1870 - 1877
22. Among the following characters which one was not considered by Mendel in his experimentation pea?
    a) Stem – Tall or dwarf
    b) Trichomal glandular or non-glandular
    c) Seed – Green or yellow
    d) Pod – Inflated or constricted
23. Name the seven contrasting traits of Mendel.
24. What is meant by true breeding or pure breeding lines / strain?
25. Give the names of the scientists who rediscovered Mendelism.
26. What is back cross?
27. Define Genetics.
28. What are multiple alleles
29. What are the reasons for Mendel's successes in his breeding experiment?
30. Explain the law of dominance in monohybrid cross.
31. Differentiate incomplete dominance and codominance.
32. What is meant by cytoplasmic inheritance
33. Describe dominant epistasis with an example.
34. Explain polygenic inheritance with an example.
35. Differentiate continuous variation with discontinuous variation.
36. Explain with an example how single genes affect multiple traits and alleles the phenotype of an organism.
37. Bring out the inheritance of chloroplast gene with an example.
