Agricultural Courses

- B.Sc in Agriculture
- B.Sc in Genetics and Plant Breeding
- B.Sc in Agriculture Economics and Farm Management
- B.Sc in Animal Husbandry
- B.Sc in Fisheries
- B.Sc in Forestry
- B.Sc Soil and water management
- B.Sc in Horticulture
- B.Sc Agriculture and Food Business
- M.Sc in Agronomy
- M.Sc Agricultural Economics
- M.Sc Seed science and Technology
- M.Sc Agricultural Entomology
- M.Sc Agricultural Statistics
- Diploma in Agriculture

Various Botany courses

- Bachelor of Science in Botany
- Bachelor of Science (Hons) in Botany
- Master of Science in Botany
- Master of Science in Botany and Forestry
- Master of Science in Applied Botany
- Master of Science in Herbal Science
- Post Graduate Diploma in Medico botany
- Post Graduate Diploma in Plant Biodiversity

Specializations available for botany are:

- Cytology
- Lichenology
- Palynology
- Bryology
- Phycology
- Forestry
- Phytopathology
- Plant physiology
- Agronomy
- Plant ecology
- Genetics
- Economic botany
- Palaeobotany
- Ethnobotany
- Phytochemistry
- Plant morphology
- Plant anatomy
- Plant genetics
- Horticulture
- Plant systematic

Veterinary Science

Bachelor of Veterinary Science or B.V.Sc. is an undergraduate program in veterinary

Botany Career Opportunities and Job Prospects

The amount of diversity in the field of Botany gives it students to choose their specializations as per their choice, aptitude and interests. One can be a part of any reputed organization as a

Plant explorer: Botanist with a passion for plants who could be a photographer, writer, expeditioner, etc

Conservationist: Is an individual who works for the conservation of the environment and is often linked to organisations working for the cause.

Ecologist: A person who works for the eco-system and a balanced environment.

Environment consultant: Some botanists qualify to work as environmental consultants, providing inputs and advice for the conservation of the environment.

Horticulturist: A horticulturist knows the science behind different plants, flowers, and greenery. They conduct research in gardening and landscaping, plant propagation, crop production, plant breeding, genetic engineering, plant biochemistry, and plant physiology.

Plant biochemist: Biochemists study the chemical and physical principles of living things and of biological processes, such as cell development, growth, heredity, and disease.

Molecular biologist: Molecular biologists conduct research and academic activities. The research component involves the study of biological structures in well-equipped laboratories with advanced technology to help them explore complex molecular structures and their particular functions. The equipment may include microscopes, lab centrifuges, computers with specific software that allows them to analyze obtained data, and many more.
