FOREST TYPES OF INDIA
Champion and Seth (1968)

I. Moist Tropical Forests

01. Tropical wet evergreen forests
02. Tropical semi-evergreen forests
03. Tropical moist deciduous forests
04. Littoral and swamp forests

II. Dry Tropical Forests

05. Tropical dry deciduous forests
06. Tropical thorn forests
07. Tropical dry evergreen forests

III. Montane Sub-Tropical Forests

08. Sub-tropical broad leaved hill forests
09. Sub-tropical pine forests
10. Sub-tropical dry evergreen forests

IV. Montane Temperate Forests

11. Montane Wet temperate forests
12. Himalayan moist temperate forests
13. Himalayan dry temperate forests

V. Sub-Alpine Forests

14. Sub alpine forests

VI. Alpine Scrub

15. Moist alpine scrub
16. Dry alpine scrub

Figure 7.23: Map showing forest types of India. Champion and Seth (1968)

c. Fresh water swamp forests

These forests grow in low lying land areas where rain or river water gets collected for some time. So the water table is closer to the earth surface. The common plants are *Salix, Acer, Ficus* and all varieties of grasses and sedges. These forests are found in wetlands of Kanchipuram, Kanniyakumari of Tamil Nadu.

II. Dry Tropical Forests

These are classified into three types: Tropical dry deciduous forests, tropical thorn forests and tropical dry evergreen forests

5. Tropical dry deciduous forests

These forests are found at about 400 to 800 m MSL .These forests are found in the areas where annual rainfall is usually low, ranging between 70 and 100 cm. The largest forest area of the country is occupied by tropical dry deciduous forest. The dry season is long and most of the trees remain leafless during this season. The forest trees are not dense, and grow up to 10 to 15 m in height. The common plant species are *Dalbergia, Diospyros, Terminalia, Acacia, Chloroxylon,*
