11. Fruit colour in squash is an example of
    a) Recessive epistatsis
    b) Dominant epistasis
    c) Complementary genes
    d) Inhibitory genes
12. In his classic experiments on Pea plants, Mendel did not use
    a) Flowering position b) Seed colour
    c) Pod length d) Seed shape
13. The epistatic effect, in which the dihybrid cross 9:3:3:1 between AaBb Aabb is modified as
    a) Dominance of one allele on another allele of both loci
    b) Interaction between two alleles of different loci
    c) Dominance of one allele to another alleles of same loci
    d) Interaction between two alleles of some loci
14. In a test cross involving F_1 dihybrid flies, more parental type offspring were produced than the recombination type offspring. This indicates
    a) The two genes are located on two different chromosomes
    b) Chromosomes failed to separate during meiosis
    c) The two genes are linked and present on the some chromosome
    d) Both of the characters are controlled by more than one gene
15. The genes controlling the seven pea characters studied by Mendel are known to be located on how many different chromosomes?
    a) Seven b) Six
    c) Five d) Four
16. Which of the following explains how progeny can posses the combinations of traits that none of the parent possessed?
    a) Law of segregation
    b) Chromosome theory
    c) Law of independent assortment
    d) Polygenic inheritance
17. "Gametes are never hybrid". This is a statement of
    a) Law of dominance
    b) Law of independent assortment
    c) Law of segregation
    d) Law of random fertilization
18. Gene which suppresses other genes activity but does not lie on the same locus is called as
    a) Epistatic b) Supplement only
    c) Hypostatic d) Codominant
19. Pure tall plants are crossed with pure dwarf plants. In the F_1 generation, all plants were tall. These tall plants of F_1 generation were selfed and the ratio of tall to dwarf plants obtained was 3:1. This is called
    a) Dominance b) Inheritance
    c) Codominance d) Heredity
20. The dominant epistatis ratio is
    a) 9:3:3:1 b) 12:3:1
    c) 9:3:4 d) 9:6:1
21. Select the period for Mendel's hybridization experiments
    a) 1856 - 1863 b) 1850 - 1870
    c) 1857 - 1869 d) 1870 - 1877
22. Among the following characters which one was not considered by Mendel in his experimentation pea?
    a) Stem – Tall or dwarf
    b) Trichomal glandular or non-glandular
    c) Seed – Green or yellow
    d) Pod – Inflated or constricted
